

For easier carrying and transportation of the compact and portable Suitcase, a special set of backpacks has been designed. All equipment is fitted in one grab-and-go set making quick departure easier. The backpacks have been developed together with the defense forces to meet their demands, and are now in use.

EASY TRANSPORT

The backpacks are specially designed to simplify transportation of the Suitcase. It is perfect when carrying the Suitcase through rough terrain, through narrow passages and for quick loading on a helicopter or aircraft. Carrying the Suitcase on your back will free your hands for other activities.

SMART PACKAGING

The two backpacks can be zipped together for easier loading on a helicopter or aircraft. The backpacks are worn, one on the back and one in the front for balance. The Suitcase terminal packs in one of the backpacks, and the power supply, spectrum analyzer, laptop and cables in the other.

ROBUST CONSTRUCTION

The backpacks are constructed in a high-performance ballistic nylon that is rugged and durable. Robust handles on each side makes the backpack easy to lift when not worn. Padding encapsulates the equipment for comfort and protection.
